***For assembled hot tubs!**

Transportation box

ACCESSORIES

Metal safety fence for heater chimney

Bottle holder

Tent cover

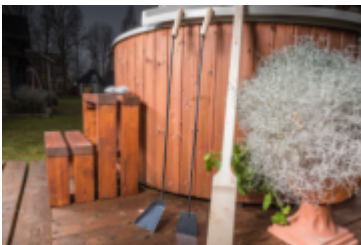

Wooden cover

Led light

Paddle from spruce

Scoop and poker

Floating solar thermometer

FOUNDATION

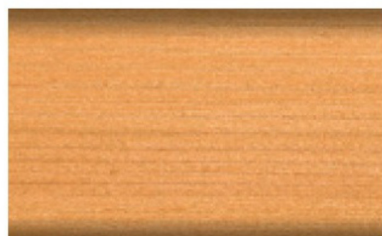

A stable, even and sustainable space is needed to set up a Hot Tub on it. Gravel, loose chippings, quarry tiles (flagstones) are recommended. A ground with humus or patches of grass is not suitable. A drainage could be of advantage depending on the local conditions. A concrete foundation is not necessary. It is important that air can circulate underneath of the Hot Tub so that damp can vaporize.

PAINTING

AUTOMATIC MACHINE SPRAY TECHNOLOGY

Benefits

One of the main and most obvious benefits of using a paint machine is the speed and flexibility at which we can suggest our painting service for all of our products. A spray paint machine can get the work done faster and more consistently than manually painting. While the machine works faster, it improves quality too – sprayers produce an even coat of paint, leaving a high-quality finish. With our painting service from now, we can suggest our client's maximum flexibility! Not assembled products such as Grill cabins, Pavilions, Camping pods, and other products of any size you can order painted too!

PROFESSIONAL SPRAY

The high-quality preservative finish is professionally spray applied in the factory to three sides of the wood. The product is treated in your choice of color (one color for all product).

STAIN | PAINT

Which type of paint should I Use?

Properly painting and impregnating is one of the most important things to consider when thinking about how to extend your product's lifetime. Paint and natural wood finish instantly spruce up the aesthetics of your product. The decision you will need to make is if you want to use a water-based wood stain or paint. Both will offer you UV protection. The wood stains will allow the texture of the wood to show through and many are now available in a vast range of colors, however, paints will give you an intensive color, but will cover the grain and texture of the wood.

USAGE AND MAINTENANCE

ATTENTION! Read and follow all instructions carefully before installing and using this product!

- At first, water will leak, within 3-5 days the tub will swell and become completely tight.
- Fire and hot water may lead to serious injuries! ***Never leave your children and those with disabilities unattended!***
- Cleaning and maintenance shall not be made by children without any supervision.
- Our Hot tub can't be used by children aged 8 years and persons with reduced physical, sensory or mental capabilities.
- ***Keep this product more than 2 m away from the pool*** (for France 3.5 m), to prevent children from climbing on it and accessing the pool.
- Never heat the Hot Tub when it is empty! The Hot Tub could get on fire and unrepairable damages may occur!
- Standard our heaters are made from 304-grade stainless steel. ***If chlorine, bromide, saltwater, or other chemicals will be used heater steel grade must be upgraded to 316-grade stainless steel.***
- ***It is very important to empty the heater from the water as well in case there are minus degrees outside.***
- All information is based on experiences made and is the best of our beliefs. The local circumstances and other conditions must be taken into consideration from each individual Hot Tub user.
