

SAUNA BARREL Ø1.9 X 2 M

PRODUCT DESCRIPTION

This unique Sauna barrel is 2 m length 1.9 in diameter can freely fit in any size of the garden. The Barrel can be assembled from start to finish in just eight hours. The Sauna Barrel can be made of spruce or thermo wood.

Upon the customer's request, we can install a wood-fired furnace or an electric heater in the barrel sauna. The thickness of sauna barrel walls is 38 mm or 58 mm; the thickness of a solid wood flooring is 18 mm.

The roof of the sauna can be made of bitumen shingles (black, red, or green) or wooden shingles. Overall height including the roof is 2.1 m.

Additionally, there are various options of windows in the back and front walls available (see the picture below). One of the options is to have an entire back wall made from the glass. This glass is 10 mm thick, tempered, brown-toned, and covered with a 100-micron protective film. There is a special safety fence between the glass wall and a sauna heater inside.

Sauna room volume 5 m³.

SPECIFICATION

People	4 persons
Timber	Spruce / Thermowood
Shape	Round
Room	1
Inside area	4.7 m ²
Sauna area	4.7 m ²
Diameter	1900 mm
Total height	2100 mm
Floor thickness	18 mm
Wall thickness	38 mm
External dimension	1933 x 2000 mm
Door size	690 x 1600 mm
Window size	213 x 665 mm

STANDARD SET

- Sauna barrel;
- Roof covered with bitumen shingles of your selected color;
- Stainless steel tightening bands;
- 2 tempered glass windows in the back wall (brown);
- Door with a lock and a tempered glass window;
- Sauna benches;
- Heat-resistant plates for the heater/stove.

DELIVERY

Assembling time	8 hours
Size of pallets (LxWxH)	2.1 x 1.2 x 1.3 m
Weight	800 kg

The sauna is delivered to a customer fully assembled or not-assembled, but fully complete, with detailed assembly instructions and drawings, and packed on a pallet (KIT)*. Two people can easily assemble this sauna barrel in 8 hours.

*Size of a assembled cargo (L x W x H): 2.10 x 2.03 x 2.09 m
Weight: 600 kg

**Comment: sauna barrels with the glass back wall are delivered only fully assembled.*

HEATER AND CHIMNEY KIT

Electric heater Harvia Vega BC60, 6 kW (5-8 m3)

Wood burning heater Harvia M3, 16.5 kw (6-13 m3)

Wooden Ladle

Bucket + Ladle Duo (White)

Stainless steel door sill

FOUNDATION

It is very important to have a proper base for your Sauna. Therefore, we recommend following our sketches and consulting a qualified local builder or engineer. Making sure that the base for your Sauna fits the location is of utmost importance.

Due to an improper base, the structure may crack. If the product is unevenly seated, the geometric shape of the building may change, which can result in the door/windows twisting, and/or gaps. In the worst-case scenario, the product may even collapse.

- Before building the base, make sure you take into account the landscape and the ground conditions on which the Sauna will stand.
- The base under the product must be prepared specifically for the Sauna.
- The base must be homogeneous, tight and level.
- Make sure that the properties of the base do not change over time. We recommend
- making the base out of concrete and water-proofing it before installation.

If you do not follow recommendations for building the base, the product will lose its warranty!

PAINTING

AUTOMATIC MACHINE SPRAY TECHNOLOGY

Benefits

One of the main and most obvious benefits of using a paint machine is the speed and flexibility at which we can suggest our painting service for all of our products. A spray paint machine can get the work done faster and more consistently than manually painting. While the machine works faster, it improves quality too – sprayers produce an even coat of paint, leaving a high-quality finish. With our painting service from now, we can suggest to our client maximum flexibility! Not assembled products such as Grill cabins, Pavilions, Camping pods, and other products of any size you can order painted too!

PROFESSIONAL SPRAY

The high-quality preservative finish is professionally spray applied in the factory to three sides of the wood. The product is treated in your choice of color. You can choose two colors for one product: one for almost all product details and another for finishing details.

STAIN | PAINT

Which type of paint should I Use?

Properly painting and impregnating is one of the most important things to consider when thinking about how to extend your product's lifetime. Paint and natural wood finish instantly spruce up the aesthetics of your product. The decision you will need to make is if you want to use a water-based wood stain or paint. Both will offer you UV protection. The wood stains will allow the texture of the wood to show through and many are now available in a vast range of colors, however, paints will give you an intensive color, but will cover the grain and texture of the wood.

USAGE AND MAINTENANCE

USING YOUR SAUNA PREPARING YOUR SAUNA FOR USE.

- If you have wood burning heater, make sure to remove the protective film of the heater chimney before heating.
- Check the Sauna before heating. No flammable objects must be left on or near the heater.
- Check that there is water in the water tank (if you are using it).
- Ensure that the Sauna door is unlocked and easy to open before using it. If necessary, sauna door must be adjusted by the customer.
- Do not mount any additional accessories or shelves above the heater.
- Turn the Sauna heater on.
- The thermometer should be located at head level in the Sauna. It should be further away from the heater, so it does not give a false reading.
- Wait for the Sauna to reach the required temperature (normally 80-90° C).

All users should be aware of the potential dangers and requirements prior to participation in the Sauna!

THINGS TO NOTE WHEN USING THE SAUNA

Enjoy the many health benefits of the relaxing heat of your Sauna. But remember: being inside the hot Sauna for long periods of time raises your body temperature, which may be dangerous, especially for those with a heart condition or other health risks. **Generally, the recommended time inside a Sauna is from 10 to 15 minutes.** After a period of heating, take a **5 minute break** and then repeat. Also:

- Familiarize yourself with the safety instructions and keep away from the heater when it is hot.
- Be very careful when moving in the Sauna, as the benches and floors may be slippery!
- The Sauna should not be used by pregnant women or very young children.
- Remove all jewelry before entering the hot Sauna.

MAINTENANCE

Wood is a natural material and can change through time. Cracks of various sizes, structural or color changes are not the defects – rather, they are features of the wood. Natural wood (not impregnated) becomes grayish after being left untouched for a while. Later it can turn blue and get covered with mold.

- Impregnate and paint the wood to protect the product from outside. We recommend to inspect Sauna every 6 month and evaluate need of re-impregnation, re-painting.
- When not in use, keep a bucket full of water in the Sauna during summer.
- Doors of the Sauna must be adjusted regularly.
- You should keep the sauna ventilation open all the time, to allow it time to dry and air out to avoid mold.
- To remove bench stains, use a mild soapy water and a soft cotton cloth. This can also be used on the heater itself - just make sure it's off and completely cool when you clean it.
- Don't use harsh or abrasive chemicals on benches, as these can bleach and warp the wood, ruining the grain and turning it grey.

With these simple maintenance tips your Sauna will stay inviting, fresh, and enjoyable!
